A Queen's Award for Enterprise:2005 highlights exceptional achievement for Cableflow

High Wycombe based Cableflow International Limited has been rewarded with Britains highest business honour, a Queen's Award for Enterprise: 2005 and places them amongst the country's business elite. The corporate honours are conferred on the small number of winners each year by Her Majesty the Queen on 21st April, her official birthday, in recognition of business excellence in several categories. Cableflow has been rewarded for Innovation, seen by many as Royal and ministerial endorsement of exceptional products for the future.

The Cableflow product is used in the construction industry to facilitate the provision of building services in new and refurbished hospitals, an area which has seen increased activity in recent years and reflects an exceptional achievement in the market sector for such a young company.

Commenting on the announcement of the award Cableflow Managing Director Graeme Dell said: " This Award signifies recognition from across the business and design communities as well as Royal approval of our innovation and is a fantastic reflection upon our staff at CABLEFLOW. Since the business was formed in 1989 there have been many sacrifices made by all of our staff and the grant of this award by Her Majesty the Queen on the Prime Minister's recommendation justifies all of the effort and pride we have placed in developing and proving this product".

Their Medisys integra[™] product is a singular module or series of modules for delivering 'bedhead' services in hospital wards and similar inpatient areas. A variety of patientcare services such as medical gases and fluids, nursecall, monitoring and communication systems, electrical power, general room and patient reading/observation lighting are delivered by a single integrated trunking unit which has been developed to benefit from offsite manufacturing techniques and which is simple to install and maintain. A key element of the innovation provides the sole source of general room illumination which consequently significantly reduces the construction times and running costs of new and refurbished hospital buildings. It delivers enhanced clinical benefits at the bedhead for nursing staff and patients alike whilst its low maintenance characteristics and life expectancy are further key assets for healthcare developers.

An understandably delighted Dell added: " Our dedication has achieved what many in our industry claimed wasn't possible a few years ago. Belief in our concept linked with a dogged determination to succeed in the face of severe competition from our rivals both at home and abroad has paid off. We now have a proven track record with the product in service and this Award is recognition from the very top that this product does what it says it does. We are all confident that this will be reflected in a continued and very exciting growth period for the company. "
